Geometry-matched MOFs can follow different energetic routes
Attraction-selected pair: Δln S_{attr} differs by 0.658
M089
M192
ln S_{CO_2/N_2}
WCA
+ attraction
+ electrostatics
Electrostatic pair: Δln S_{elec} differs by 1.860
M029
M085
ln S_{CO_2/N_2}
WCA
+ attraction
+ electrostatics
M029: local electrostatic selectivity increment
global ΔlnS = 0.141; positive weight = 58%
y (\AA)
x (\AA)
M085: local electrostatic selectivity increment
global ΔlnS = 2.001; positive weight = 79%
y (\AA)
x (\AA)
Probability-weighted local δ_{elec}
